hand selected by racing engineer legend carroll smith the 28 sae technical
papers in this book focus on the chassis and suspension design of pure racing
cars an area that has traditionally been farmed out to independent designers
or firms since the early 1970s smith believed that any discussion of vehicle
dynamics must begin with a basic understanding of the pneumatic tire the
focus of the first chapter the racing tire connects the racing car to the track
surface by only the footprints of its four tires through the tires the driver
receives most of the sensory information needed to maintain or regain control
of the race car at high force levels the second chapter focusing on suspension
design is an introduction to this complex and fascinating subject topics
covered include chassis stiffness and flexibility suspension tuning on the
cornering of a winston cup race car suspension kinematics and vehicle
dynamics of road racing cars chapter 3 addresses the design of the racing
chassis design and how aerodynamics affect the chassis and the final
chapter on materials brings out the fact that the modern racing car utilizes
carbon construction to the maximum extent allowed by regulations these
technical papers written between 1971 and 2003 offer what smith believed to
be the best and most practical nuggets of racing chassis and suspension
design information
